

HITESH CHOUDHARY

Java Developer | Data Structures & Algorithms | Salesforce-Integrated Enterprise Systems

hiteshchoudhary2508@gmail.com | +91 6375807336 | github.com/Hiteshchoudhary25 | linkedin.com/in/hiteshchoudhary25

PROFESSIONAL SUMMARY

Java-focused software engineer with a strong foundation in OOPs and DSA, having solved 700+ problems on LeetCode in Java. Hands-on experience building Java components and validating data across enterprise, Salesforce-integrated platforms (CustDb, Polar, Core, Snowflake) at Coforge. Also builds full-stack, AI-integrated apps using the MERN stack and applies Python for data processing.

TECHNICAL SKILLS

- Programming & Core CS: Java (Collections, OOPs), Python, Data Structures & Algorithms (700+ LeetCode problems solved), Object-Oriented Design
- Enterprise Systems Exposure: Salesforce-integrated platforms, Snowflake (CUK Snowflake), CustDb, REST API validation (Postman)
- Data & Backend: SQL (query validation, relational data integrity), MySQL, MongoDB
- Full-Stack Development: React.js, Node.js, Express.js, Tailwind CSS
- Tools & Practices: Git, Page Object Model, Maven, Jira

PROFESSIONAL EXPERIENCE

Graduate Engineer Trainee — Coforge India

Dec 2025 – Present

Carnival UK Project (MyCunard & P&O Cruises platforms)

- Built and maintained 25+ Java components using Selenium WebDriver and TestNG within an OOP-based Page Object Model, working directly with enterprise platforms integrated with Salesforce, Snowflake, and CustDb.
- Validated data integrity across Salesforce-integrated backend systems (CustDb, Polar, Core) using structured SQL queries, catching data-mismatch issues between transactions and database records ahead of production deployment.
- Collaborated within a 4-member engineering team to design reusable Java components, improving consistency across sprints and reducing duplicate effort by ~30% on recurring release checks.
- Performed REST API authentication, request/response, and status-code validation using Postman, strengthening reliability of API integrations across production systems.
- Identified and logged 15–20 defects in Jira, including several high-severity issues resolved before release, contributing to platform stability for two production applications.

PROJECTS

CareerBoost — AI-Powered Interview Preparation Platform

MongoDB, Express, React, Node.js, Tailwind CSS, Gemini API

- Engineered an AI-driven platform that parses resumes and generates personalized interview questions via the Gemini API, with real-time scoring across code, speech, and text response modes.
- Added a resume-builder module that shortened candidate prep time by consolidating profile creation and mock-interview practice into a single workflow.

Real-Time Chat Application

React, Socket.IO, Node.js, Express, Zustand, Tailwind CSS

- Architected a WebSocket-based messaging system supporting concurrent multi-user sessions with live presence status and sub-second message delivery.
- Managed global application state with Zustand to keep the UI responsive under simultaneous connections, with a component structure built for horizontal scaling.

Flipkart Product Review Sentiment Analysis

Python, NLTK, VADER, Pandas, Matplotlib, Plotly

- Processed raw Flipkart review data (stopword removal, stemming, regex normalization) and applied VADER sentiment analysis to classify reviews, surfacing insight through word-cloud and pie-chart visualizations.

EDUCATION

Bachelor of Technology, Computer Science & Engineering — JECRC University, Jaipur

2022 – 2026

CGPA: 8.5 / 10
